GIT, Ticket / Time Tracking
HTML (4,5), CSS (2,3)
jQuery, JS animations
PHP, .NET, and RoR environments
MVC frameworks

Background

After finishing school for Interactive Media Design, I began working for Active Website[1]. My work here included a webapp for Waste Management and several ad campaigns as Lead Marketing Designer.

In March 2011 I began working for Zerista[2], where I designed and developed their company site while leading a campaign to improve the UI and performance of their social conferencing product.

I started at Orange Collar Media[3] in October 2011, developing eCommerce sites using the Magento platform for a variety of clients, including Bioware and Rovio's Angry Birds. I managed a small team of inhouse and offshore developers and coordinated their work with client requests.

Currently I work at BlueModus[4], a tech firm that has created web solutions for the Bacardi family of products as well as the pharmaceutical companies Shire and Astrazeneca. Here I lead the development and delivery of complex iPad webapps for doctors through the Veeva platform. I manage a small internal and offshore team and coordnate delivery with clients in multiple time zones.

Education

Art Institute Colorado
July 2005 - December 2008
B.A. in Web Design & Interactive Media

While in school I worked on a number of freelance projects, as well as design work for the school itself, including their 2008 Summer Studio website for prospective students.

Today, I still aid the Art Institute by participating in a Professional Advisory Committee that critiques graduating students, and provides industry insight to school staff to help them craft the curriculum.

Experience

BlueModus[4]
May 2013 - Present
Solutions Lead

Orange Collar Media[3]
October 2011 - May 2013
Technical Lead
